About the Scientific Session

CMEs are great platforms which serve to maintain, develop, or increase the knowledge, skills, and professional performance. The educational material available in such educational activities is most sought off by both the consultants and the residents alike. Keeping in view of the varied interests and areas which needed greater focus, the department of Pathology at PESIMSR has carefully chosen topics which would be of use and interest to the practicing pathologists in general and post graduates in particular.

The role of a surgical pathologist in the evaluation of biopsies from the heart is both fascinating and a challenge in itself. The topic on endomyocardial biopsy interpretation would be of value to the consultant pathologists and the post graduates who would later work in centers with active cardio thoracic units. Cytology is an art which is rare to master. The cytopathology of the respiratory tract is interesting yet challenging. The lecture on the cytology of lesions of the lung would surely be a visual treatise. This would be complimented by a case seminar on lung biopsies. Quality is the need of the hour. It is apt for all the budding pathologists to be ready to meet the market concerns and don the mantle of consultants in this aspect too!! A lecture on this is scheduled for a lively interaction.

To keep up the tempo of the CME, a quiz for the post graduates has been scheduled which will kindle their grey matter.

We welcome you all to this academic feast.
